● GENERAL DESCRIPTIONS

M3283 is RS485 to Ethernet Multiplexer Gateway using the ARM Cortex M3's family microprocessor as the Ethernet controller to be a RS232 to Ethernet controller with limit devices. It can provide you lower cost, but limited functions TCP/IP stack. M3280 series are using the state machine to handle TCP/IP stack because of the limit resources.

M3283 is a small size and low cost module is easy to implement an application in IA, Automatic, Security and any low data rate data transmit ion as a coprocessor. M3283 supports the ARP, ICMP, TCP, UDP, IP, DHCP-Client and HTTP protocols, also support SNMP(Optional) , SNTTP(Optional). You can use the browser to setting parameters of the M3283, or you can use the commands to setting parameters of the M3283 series Web Server. It is easy to management in Individual or via Application software.
